DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 140-151 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pettus, US 6,031,977.

As per claim 140-151, Pettus teaches a processor that executes the programmed logic to enable a user at the user station to access, via the user interface, fixed content from each of a plurality of portable storage media together with respective remote content from one or more remote content sources, and wherein, for each of the plurality of portage storage media, the user interface is customized with respect to the fixed content stored on the portable storage medium when the user access the fixed content stored on the storage medium. Pettus teaches a software product that obtains access to a selected remote service by means of a communications directory service. Specifically, the software product offers the user the ability to access a new service for use by an application program already running on the user station. The communication directory

service includes shared libraries, which store a service object and network address associated with each available service offered on a communication network. It would have been obvious to one of ordinary skill that shared libraries would come from different publishers. Pettus also teaches that the object manifest implements correct protocols to ensure that the selected remote service is received at the user station. Further, it would have been obvious to one of ordinary skill in the art at the time of invention that because the software product takes the object-oriented approach, this ensures that user interface will be customized with the respective application program.
